-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 4, 6 and 7 are rejected under 35 U.S.C. 102(e) as being anticipated by Kauffman (US 6,363,857).

Kauffman discloses a transportation system powered by magnetic levitation, which accelerates and propels a vehicle along a track from a first station to a second station. The system is also comprised of a first track 32 and a second auxiliary track 38. Both have magnets embedded in them for communicating with the magnets 24 of the vehicle. The arms 22 on the top of the vehicle act as lifting means to move the vehicle from the lower track to the upper track at various switch points along the route. It is understood that the track route would follow the ground terrain where it is built; therefore the vehicle would be moved by gravity at various points where the track is on a downward grade.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 5 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kauffman in view of Bennett et al (US 6,024,647).

Kauffman et al discloses the transportation system as described above. However, Kauffman et al does not specifically disclose the use of motion controlled seats for passengers. Bennett et al discloses a vehicle with motion controlled seats that move in response to the movement of the vehicle and adjust the position of the passengers accordingly. It would have been obvious to one of ordinary skill in the art to have used the Bennett et al reference as a teaching to show that motion controlled seats, like those of Bennett et al, could be used in a transportation system, like that of Kauffman, so that the passengers are insured a more stable and comfortable ride.
